UTM
Unified Threat Management

A complete all-in-one Unified Threat Management package

Smoothwall's UTM is an effective, single solution that protects your network and users against web and non-web borne threats. Smoothwall's UTM combines Layer 7 application control with perimeter firewall and stateful packet inspection to provide next generation firewall functionality.

The solution provides a complete security package, featuring real-time anti-malware protection powered by Bitdefender, HTTPS inspection, anonymous proxy detection & blocking, and intrusion detection & prevention. Furthermore, it includes our market-leading SWG web control solution.

Anti-malware protection

Intrusion detection & prevention

Perimeter firewall

Flexible deployment options

Smoothwall's UTM offering is designed as a transferable solution that can be tailored for organisations within education, government, healthcare and corporate business sectors. Deployment is available as software, one of our hardware appliances or VM, and can be deployed locally, centrally or in hybrid combination.

For sector specific information, please request a brochure at **smoothwall.com/evaluate**

smoothwall
The Web You Want

Key Features:

Next Generation Firewall

Perimeter firewall and internal segmentation firewall to protect your network against all web and non-web borne threats. Simple creation and management of firewall rules that is supported by powerful real-time logs.

Gateway Anti-Malware*

Identifies signatures of malicious content at the gateway to protect against known and zero-day threats. Anti-spam provides advanced protection against email fraud, phishing and spam. Powered by Bitdefender.

On Device Filtering

Enforce web usage policies on all devices through Smoothwall Connect, even when not connected to your network. The Connect Filter protects iOS, Mac OS, Chromebooks and Windows clients and devices.

Daily Reports & Alerts

Schedule customised reports on user activity that export to PDF, Excel and HTML, access a live view of users web activity and receive notifications for policy breaches and network outages.

Safeguarding

The safeguarding reporting suite notifies you of any safeguarding risk against seven category rulesets, including radicalisation, suicide and self-harm, allowing you to protect your users from harm.

Content-Aware Filter

New content is categorised into over 100 filter categories in real-time. Easily block specific search terms, enforce safe search on search engines, and even filter SSL traffic.

Who, What, Where, When

Build customised policies based on user or user group, content category, time, location IP, subnet and hostname, for mobile devices and laptops.

Anonymous Proxy Blocking

Real-time blocking of anonymous proxies to prevent users from circumventing the filter to access blocked content from websites or file transfer sites.

BYOD

Offer public Wi-Fi filtering and filter guest mobile devices securely on your network. Smoothwall's remote filtering supports Windows, Mac, iOS and Chromebook.

VPN

Supports both Site-to-Site (IPSec) VPNs and Remote Users (SSL and L2TP) for secure point-to-point and client connections.

Layer 7 Application Control*

Also known as Deep Packet Inspection (DPI) and allows you to control non-web traffic such as Skype and BitTorrent.

Intrusion Detection

Detect, monitor, report on and prevent malicious attacks on your system that seek to identify and exploit your network.

Link & Load Balancing

Support for multiple WAN connections in either a failover or load balanced configuration.

Bandwidth Optimisation*

Limit bandwidth use by content type, user, time and location, and web proxy cache.

Authentication

Easily integrates with Active Directory, Google, Open Directory and more.

*Available at an additional cost.

"It's an end to end, all in one box, securing the network and providing excellent filtering all in one appliance."
